^{S.J. 71} 360 CONSOLE OPERATOR CAI* Course

**BCS**

BOEING COMPUTER SERVICES, INC.

The 360 OS/MVT Operator course is now available on the Boeing Computer Services computer-assisted instruction system. The course provides instruction on the loading and processing of system and problem programs and can be taken via a terminal connected to a BCS computer through regular telephone circuits.

CAI is a relatively new method of training that provides the student individual instruction at his company's location without the necessity of a formal instructor. Classes can be taken on nearly any schedule and, in addition, do not require your computer to be taken off-line for training exercises.

The 360 operator CAI course can be used for employee training, testing, or general review. Topics include:

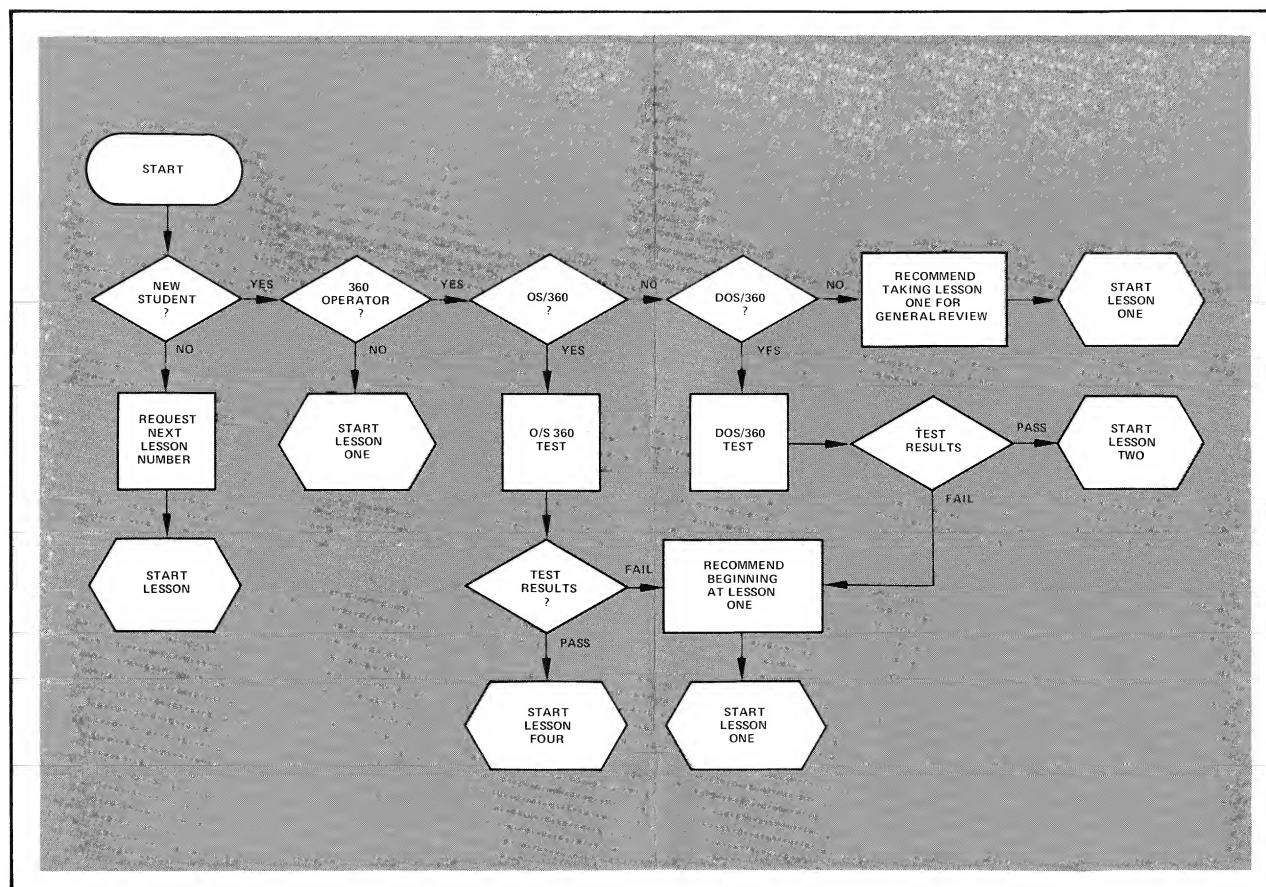

- System/360 introduction
- System preparation and MVT loading
- Basic initial program load procedure
- System/operator message formats
- Operator message entries
- Status inquiries
- Cold start-warm start initial program loading
- Operator-invoked utilities
- Control panel displays
- Basic recovery procedure
- Active initial program load exercise

The type of logic illustrated in the following flow chart is used extensively in each lesson of

the 360 console operator CAI series. This feature allows the student to skip material with which he is familiar and, at the same time, to ensure that he does in fact know it. The student's responses to actual situations and problems posed by the computer are evaluated, and the lesson continues if he responds correctly. Incorrect responses, however, cause

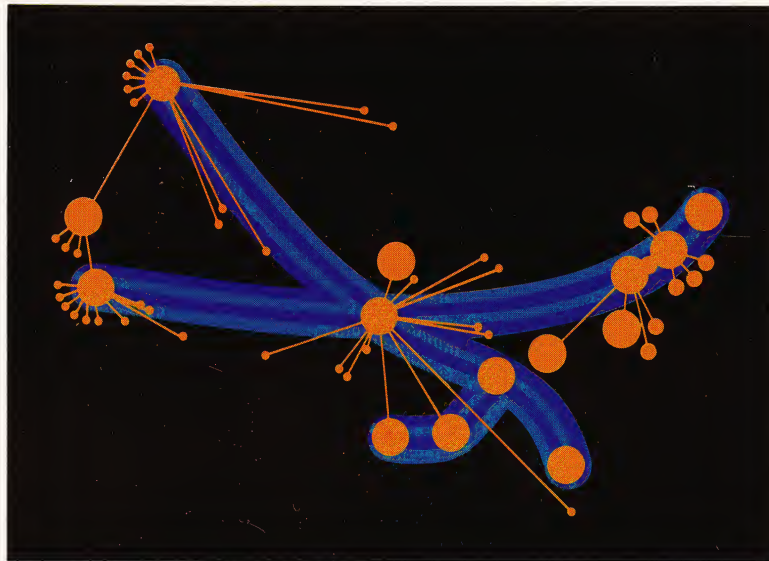

the computer to attempt additional, remedial instruction and testing on that particular topic.

Typical CAI applications are certification of operators, conversion from DOS or MFT to OS/MVT, initial console operator training, and refresher training.

Facilities Management

FACILITIES MANAGEMENT

Facilities management is a means to improve the cost performance of your data processing system. The service offered by Boeing Computer Services includes design, development, implementation, operation, and management of data processing functions.

Selection and Installation of Hardware and Systems.

BCS will help you specify your information needs and select from alternative system approaches. We will also work with you to negotiate favorable vendor equipment leases or purchase agreements and supervise the installation and checkout of hardware and supporting systems. We will get your systems working with minimum disruption to your business and afford you the most value for your computing dollar.

Selection and Implementation of Computer Applications.

BCS will help you increase the return on your computer investment through definition of applications appropriate to your business and financial position. We design, put in operation, and check out new or improved applications. All necessary support, including personnel training is provided. We emphasize smooth transition and minimum interference with your business.

Evaluation and Design of Data Communication Systems.

BCS will solve your remote terminal, data transmission, and computer interface problems. Through 20 years of experience we have gained extensive knowledge of such technologies as broadband communication, telephone tariff structures, and telecommunication networks.

Audits of Data Processing Performance.

BCS will monitor and analyze the performance of client installations. Using our audit team approach, we identify data processing costs, measure equipment performance, identify opportunities for improvement, and recommend specific action.

Audits of Data Processing Security.

BCS will show you how to conserve your vital business data, protect proprietary information, and comply with government security regulations. We show you how to minimize the chance of catastrophic loss of data and how to develop facilities and personnel practices that effectively meet security needs. Emphasis is on good security at a reasonable cost.

Complete Data Processing Management.

BCS will take complete responsibility for your data processing activities. We provide results for a contractually committed cost. Our responsibilities include operation of the hardware, implementation of new and improved applications, management of personnel, and acquisition and disposition of equipment and supplies.
